India - Open to relocation

CORE STACK

Backend: Java 17, Spring Boot, Spring MVC, REST APIs, microservices, Kafka, concurrency.

Frontend: React, JavaScript, Oracle JET, VBCS, HTML5, CSS3.

Data: Oracle DB, PL/SQL, PostgreSQL partitioning, Redis, Supabase, SQL tuning.

Delivery: Docker, OCI, GitHub, Maven, Node.js, Helium CI/CD, JUnit, Mockito.

STRENGTHS

7+ yrs
enterprise software engineering

25%
payroll engine throughput gain

4x
faster compensation SQL paths

10K+
events/hour production processing

EDUCATION

B.E.
Computer Engineering

Thapar Institute of Engineering & Technology, Patiala
CGPA 8.31/10

DOMAINS

Payroll, absence, and compensation systems

SQL and PL/SQL performance tuning

Android power and charging diagnostics

Market data and content automation

Abhey Deep

Senior Full-Stack Software Engineer

Senior engineer building backend-heavy product systems across Java, Spring Boot, Oracle, and React. Strong record improving payroll engines, modernizing enterprise UI flows, tuning database execution paths, and launching independent products with clean architecture.

25%

throughput improvement in payroll event processing

4x

execution-time reduction on high-volume SQL paths

10K+

events/hour in production payroll processing

PROFESSIONAL EXPERIENCE

Senior Software Engineer - Oracle India Pvt. Ltd.

Jan 2024 - Present

Gift City, India | Payroll, absence, compensation, enterprise modernization

- Redesigned Java thread-pool and batch-processing logic for a payroll event engine, improving throughput by 25% across 10K+ events/hour.
- Built Spring REST APIs for payroll, absence, and compensation modules with versioning, pagination, idempotency, and stable integration contracts.
- Modernized Oracle Fusion HCM UI flows from legacy ADF toward Redwood patterns using stateless services, VBCS, and Oracle JET.
- Tuned PL/SQL with EXPLAIN PLAN, AWR, indexing changes, and query rewrites, cutting execution time by 4x on compensation datasets.

Software Engineer II - Oracle India Pvt. Ltd.

Nov 2021 - Dec 2023

Effective-dated HR changes, retro payroll, compensation workflows

- Developed resilient processors for HR updates, retroactive payroll calculations, and compensation workflows across Fusion HCM modules.
- Improved Oracle JET and VBCS performance with lazy loading, asynchronous validations, reusable UI patterns, and cleaner action chains.
- Containerized backend services with Docker and supported release automation through Helium CI/CD pipelines.

Software Engineer - Samsung Research Institute

Jan 2019 - Nov 2021

Noida, India | Android charging systems, diagnostics, automation

- Engineered kernel-level Android charging features, including the Time-To-Full algorithm for flagship device lines.
- Built Python and Java automation that converted raw device logs into queryable datasets and sped up daily debugging workflows.

SELECTED PROJECTS

Market Narrative Storyboard Engine

markethnarrative.in

Java 17, Spring Boot, React, PostgreSQL, Redis, Docker

Launched a financial media system that aggregates market data, clusters news into source-led themes, evaluates technical setups, and publishes SEO-aware pre-market intelligence through a public archive and React admin studio.

The Win List

mywinlist.com

React, JavaScript, CSS, Supabase, Render

Built a daily-wins app with local-first tracking, optional Supabase sync, monthly review, editable ordering, image exports, and a privacy-conscious consent boundary for analytics.

System Diagnostics & Performance Analyzer

Java, Docker, OCI, SQL

Built a Java diagnostic utility that summarizes application logs, SQL latencies, thread utilization, and memory patterns into AWR-style performance views without DBA-level access.

SELECTED RECOGNITION

Recognition: Innovation Excellence Award, Samsung Mobile Development Conference second prize, and High Potential Employee recognition at Oracle India Pvt. Ltd.
